UAX Network

Layer-1 Permissioned Blockchain

Enterprise-grade, compliance-ready infrastructure built for regulated industries - not crypto speculation.

Solar-Powered Consensus

SunStake mechanism ties validator rights to solar energy output. Each solar unit mints 1 bandwidth unit.

Bandwidth Model, Not Gas

Transactions priced at \$0.09 per unit via bandwidth - no volatile gas fees, predictable enterprise costs.

40ms Finality

Fast enough for real-world trade, legal, and government applications at scale.

Tijarex

Bill Discounting & Trade Receivables Marketplace

— WHAT IS TIJAREX?

A blockchain-powered invoice discounting marketplace connecting Indian exporters with institutional investors. Exporters unlock early liquidity on their receivables. Investors access verified, on-chain trade assets.

• MVP LIVE

- ✓ MVP completed with live transactions on UAXN
- ✓ \$100M exporter mandate already committed
- ✓ 8-step invoice approval flow with full KYC
- ✓ UIOD-backed digital identity for all participants
- ✓ Buyers, Sellers, and Investors on one chain
- ✓ Targets Indian export corridor - \$776B+ market

Invoice Approval Flow

UIOD

Universal Identity of Document – The Identity Protocol

UIOD is the identity backbone of the entire UAXN ecosystem. Every participant – a citizen, exporter, farmer, institution – gets a permanent on-chain identity anchored with SHA-256 hashing.

PROTOCOL HIGHLIGHTS

- ✓ SHA-256 hash anchored on main chain
- ✓ Immutable – no modifications post-recording
- ✓ Smart Forms govern document versioning
- ✓ Used in govt, legal, agri, trade applications
- ✓ Foundation layer – every dApp depends on it

Government ID

Citizen identity anchored on-chain.
Tamper-proof, permanently verifiable.

Land Records

Property and land ownership recorded with UIOD – no more disputed title deeds.

Marriage Agreements

Powers Nikahnama – digital Nikah agreements tied to verified identities.

Cross-dApp Identity

One identity travels across Tijarex, OMAGRI, and all dApps on UAXN.

Nikahnama

Blockchain Marriage Agreement – Digitising Legal Documentation

Nikahnama

— THE PROBLEM

- Paper-based marriage agreements prone to fraud
- Manual filing with marriage certificate offices
- Costly legal verification processes
- No permanent tamper-proof record
- Delayed issuance causes disputes

— THE SOLUTION

- Digital Nikah agreement recorded on UAXN chain
- UIOD identity verification of both parties
- Instant, permanent, tamper-proof certificate
- Eliminates paperwork and office visits
- Already LIVE with real transactions

B2G

Govt integration pathway via UIOD

UnparkMe

Smart Urban Parking - QR-Based Vehicle Contact System

— WHAT WE BUILT

UnparkMe solves the everyday urban problem of blocked vehicles - when a parked car blocks another and the owner needs to be contacted quickly and anonymously.

QR Sticker System

Physical QR sticker affixed to vehicle. Scanner contacts owner without exposing personal number.

ShowMyParking Partnership

MoU signed. Integration underway for QR sticker rollout and platform connectivity.

UIOD Integration Roadmap

Future phase: vehicle identity anchored on UAXN chain via UIOD - tamper-proof registration record.

Smart City Scalability

Framework extensible to parking management, traffic enforcement, and urban mobility data.

● THE BIGGER VISION

- ✓ Urban mobility data on-chain creates immutable record of city movement patterns
- ✓ Vehicle identities via UIOD open pathway to smart contract insurance, tolling, and permits
- ✓ B2G model: city authorities as primary enterprise client
- ✓ Parking monetisation through digital permits and enforcement
- ✓ South Asia + Middle East target market - urban congestion crisis

OMAGRI

Farmer Land ID, Tokenization & Agricultural Intelligence

OMAGRI

WHAT OMAGRI DOES

- ✓ Land ID for farmers recorded on UAXN via UIOD
- ✓ Crop tokenization - each harvest as a verifiable on-chain asset
- ✓ Warehouse receipt digitisation
- ✓ Yield settlement automation via Smart Forms
- ✓ Carbon credit tracking per farm

THE PARTNERSHIP

- ✓ OMAGRI is the first signed dApp partner on UAXN
- ✓ Access to a large network of registered farmers
- ✓ Bull Agritech pipeline: Rs 35Cr volume, 6,000+ farmers onboarded
- ✓ Farmer credit profiles built through permanent on-chain trade records
- ✓ Revenue model: selling agricultural intelligence layer

WHY BLOCKCHAIN HERE

- ✓ Indian farmer land disputes cost billions annually
- ✓ No unified digital ID for 140M+ smallholder farmers
- ✓ Tokenization unlocks credit access for unbanked farmers
- ✓ On-chain records create creditworthy profiles for lending
- ✓ Carbon credit market needs verifiable proof of land stewardship

IFFCO Carbon Credits

NDA Signed. Historic Carbon Credits. Future Yields.

IFFCO - Indian Farmers Fertiliser Cooperative - is one of the largest agricultural cooperatives in the world. UAXN has signed an NDA with IFFCO to explore blockchain-backed carbon credit extraction and management.

01

Historic Credit Extraction

Past years of responsible land stewardship by IFFCO-networked farmers can be quantified and converted into verifiable carbon credits, creating a retroactive asset class.

02

Future Credit Pipeline

Ongoing agricultural practices generate future carbon yield. UAXN provides the ledger for real-time monitoring, issuance, and trading of these credits.

03

Why We Are the Right Fit

UAXN's OMAGRI dApp already has land ID and crop records infrastructure. Carbon credit provenance requires exactly the kind of immutable, permanent storage UAXN is built for.

04

The Global Market

Voluntary carbon markets are projected to reach \$50B by 2030. India's agricultural sector holds enormous untapped credit value. IFFCO's farmer network is one of the largest in the world.

Why UAXN is Different

— DIMENSION	 UAXN	— TYPICAL BLOCKCHAIN
Architecture	• Permissioned, solar-powered, bandwidth model	Public chain, gas fees, speculative
Identity Layer	• UIOD - native identity built in	External wallet, no KYC by default
Governance	• Smart Forms - no immutable code bugs	Smart contracts - errors permanent
Compliance	• Non-speculative, non-token design	Token mechanics trigger securities law
Energy	• Solar-tied validator rights	High energy consumption
Market Focus	• Enterprise, Govt, Regulated industries	DeFi, crypto native users

The Opportunity

We have built the infrastructure. We have built the applications.

We have the mandates.

UAXN is not a whitepaper - it is a working blockchain with live dApps, signed partnerships, and real revenue potential across trade finance, legal documentation, urban mobility, agriculture, and carbon markets.
