

UAX 2.0: Institutional Cross-Border Settlement Infrastructure

Powered by UAX 2.0.

1. Executive Overview

UAX 2.0 • Global Cross-Border Settlement Infrastructure

UAX 2.0 enables institutional participants to access and settle digital asset liquidity across global markets through proprietary programmable settlement infrastructure.

How UAX 2.0 Enables the Model

Global Liquidity → UAX 2.0 → Local Settlement → Repatriation → Repeat

- **Acquire:** Access digital asset liquidity through approved institutional venues.
- **Bridge:** Secure assets in controlled custody and mint corresponding USDT.uax with 1:1 reserve backing.
- **Settle:** Transfer and settle USDT.uax with eligible institutional counterparties across jurisdictions.
- **Repatriate:** Move capital through appropriately structured and compliant corporate channels.
- **Scale:** Replicate the infrastructure across jurisdictions, corridors and institutional liquidity pools.

Indicative Economics

Notes: All figures are proposal assumptions and subject to market conditions, liquidity, execution costs, taxation, applicable laws and regulatory approvals.

2. Market Sizing • TAM / SAM / SOM

Global Opportunity for UAX 2.0

Figures are planning estimates and should be validated against current volumes, regulations and corridor economics before being presented as confirmed market data.

3. Operating Model & Capital Rotation

4-step capital rotation, repeated ~4x monthly under the baseline model.

1

Acquire

Acquire USDT through institutional OTC desks or regulated exchanges at competitive market rates.

2

Bridge & Tokenization

USDT is held in corporate multi-sig custody and corresponding **USDT.uax is minted 1:1** on UAX 2.0.

3

Institutional Settlement

USDT.uax is settled with eligible institutional traders, exchanges and corporate counterparties through KYC/AML-compliant channels.

4

Capital Repatriation

Capital returns through appropriately structured and compliant cross-border corporate channels.

Cycle: Acquire → Bridge → Settle → Repatriate → Repeat

Monthly Volume & Profit

(Baseline ₹1 Crore Capital)

Working Capital Pool	₹1,00,00,000
Monthly Cycles	4 rotations
Total Monthly Volume	₹4,00,00,000
Gross Spread (Per Cycle)	9.78%
Net Spread After Deductions	3.28%
Net Profit (4 Cycles)	₹13,12,552
Monthly Tech & Ops Cost	-₹10,00,000
Net Monthly Profit (PBT)	₹3,12,552

Scalability Pathway

₹3 Cr Capital → ₹12 Cr Monthly Volume → ~₹29 Lakh+ Monthly Profit

At 4 rotations per month, scaling the capital pool to ₹3 Cr increases monthly transaction volume to ₹12 Cr, while fixed technology and operating costs remain broadly stable, improving operating leverage.

4. Financial Breakdown: Single Cycle

₹1 Crore Capital | Indicative Model, Per-Cycle Math

Line Item	Amount (INR)
Capital Deployed (Dubai)	₹1,00,00,000
USDT Purchased (at ₹95.10)	1,05,152 USDT
Gross Sales Realization (India, ₹104.40)	₹1,09,77,917
Gross Profit (9.78%)	₹9,77,917

Estimated Deductions Per Cycle

Deduction	Amount (INR)
Banking Wire & FX Conversion	-₹2,00,000 (2.0%)
Section 194S TDS (Off-Ramp)	-₹1,09,779 (1.0%)
Gas Fees, Exchange Fees, Slippage	-₹50,000 (0.5%)
Provisional Tax Reserve (30% on gain)	-₹2,90,000
Total Deductions	-₹6,49,779 (6.50%)
Net Per Cycle:	₹3,28,138 (3.28% net margin)

Model Note: Costs, taxes, TDS applicability and effective rates are indicative planning inputs and require validation by qualified tax, legal and banking advisors based on the final entity structure, transaction flow and applicable regulations.

5. Entity Setup & Licensing (One-Time Costs)

Two fully compliant corporate entities required: one in India (Pvt Ltd), one in UAE (IFZA/DMCC Freezone with VARA approval).

Region	Requirement	Cost (INR)	Timeline
Dubai	IFZA/DMCC Freezone Company	₹8,50,000	45-60 days
Dubai	VARA Approval & Compliance	₹12,00,000	30-45 days
Dubai	Investor/Team Visas (3x)	₹5,50,000	14-21 days
Dubai	Corporate Bank Account Setup	₹3,00,000	30-45 days
India	Private Limited Company	₹50,000	15-20 days
India	FIU-IND Registration & AML	₹3,50,000	20-30 days
India	GST & Trademark	₹2,00,000	10-15 days

Total One-Time Setup Cost:₹35,00,000

Key Regulatory Dependencies

FEMA/RBI:Review cross-border and crypto-related transactions.

FIU-IND:Register and implement AML/KYC controls where required.

UAE/VARA:Obtain required authorization before operations.

Banking:Use regulated channels and screened counterparties.

Tax/TDS:Validate treatment for the final structure and transaction flow.

Go-Live Gate:Begin operations only after all required corporate, regulatory, banking, AML/KYC and tax approvals.

Costs and timelines are indicative and subject to advisor and regulatory confirmation

6. Monthly Operations & Infrastructure Costs

Fixed monthly burn rate (operational baseline): ₹10,00,000

Cost Head	Monthly (INR)
Blockchain Dev Team (4 FTE)	₹8,00,000
Node Infrastructure & Cloud	₹1,00,000
Security Audits & Monitoring	₹50,000
Legal & Compliance Retainer	₹50,000

Total Monthly Opex ₹10,00,000

Operating Leverage

- **₹1 Cr Capital:**
₹4 Cr monthly volume with ₹3.12L modeled PBT.
- **₹3 Cr Capital:**
₹12 Cr monthly volume with ₹29L+ modeled monthly profit.
- **Beyond ₹3 Cr:**
Scaling may require ₹50L-₹1 Cr+ additional monthly investment.

Key Takeaway: Profitability improves as volume scales, while core technology and compliance costs remain relatively fixed.

Costs and profitability are indicative and subject to validation through execution and regulatory requirements.

7. Risk Awareness & Mitigation

Market Variable	Our Prepared Approach
01 Spread Dynamics	Monitor corridor economics and expand into compliant corridors.
02 Regulatory Evolution	Maintain FEMA, tax and regulatory counsel and adapt as requirements change.
03 Banking Continuity	Use regulated counterparties, maintain multi-bank relationships and complete documentation.
04 Settlement Timelines	Maintain liquidity buffers and structured settlement processes.
05 Bridge & Custody Security	Use 3-of-5 multisignature custody, audits, monitoring and a 5% USDT reserve.

Our Approach

We monitor, adapt and scale within defined compliance and risk parameters.

Controls and operating structures remain subject to applicable laws, approvals and independent legal, tax and compliance review.

8. UAX 2.0 Infrastructure Value

Why Proprietary Settlement Infrastructure?

UAX 2.0 provides direct control over settlement, custody architecture, speed and network economics, without relying on conventional bridge infrastructure.

SETTLEMENT CAPABILITIES

Infrastructure Advantage

UAX 2.0 is purpose-built as proprietary settlement infrastructure for global institutional cross-border transactions.

Figures reflect current UAX 2.0 specifications and remain subject to production validation.

9. Go-to-Market Strategy

PHASE	STRATEGY	AIM
01 • Launch	Build institutional partnerships and liquidity channels	Establish a reliable operating and settlement network
02 • Validate	Execute controlled transactions with selected counterparties	Validate execution, liquidity and operational efficiency
03 • Scale	Expand institutional participation and capital deployment	Increase transaction volume and strengthen network economics
04 • Expand	Enter additional high-opportunity global corridors	Replicate the model across markets and diversify revenue

Commercial Focus

Institutional Capital • Liquidity Partners • Regulated Exchanges • Corporate Treasuries

Growth Thesis

Establish → Validate → Scale → Globalize

10. 12-Month Execution Roadmap

Quarter	Focus	Key Actions	Target Outcomes
Q1	Build & Validate	Set up entities, regulatory readiness, banking, bridge, custody, and security	Entities ready · Regulatory path confirmed · Bridge audited
Q2	Pilot & Prove	Raise capital, run pilots, and validate economics and operations	Successful cycles · Economics validated · Reporting established
Q3	Scale & Diversify	Increase deployment, optimize operations, and assess new corridors	4 cycles/month · ₹1 Cr deployment · Corridor feasibility
Q4	Institutionalize & Scale	Target ₹2-3 Cr deployment, build reserves, and expand partnerships	₹2-3 Cr deployment · Sustainable model · Institutional readiness

11. Investment Opportunity

Institutional Cross-Border Settlement Infrastructure

UAX 2.0 combines proprietary settlement infrastructure with an India-UAE settlement model for institutional capital.

Investor Outcomes

- 15-20% target annualized returns, subject to execution and market conditions
- Capital efficiency through increased rotation and operating leverage
- Exposure to proprietary institutional settlement infrastructure
- Expansion into additional compliant corridors
